Introduction

With a built-in wireless LoRa module, this Soil Temperature and Humidity Sensor transmits the collected soil T&H data to the base station and then to the server. Built on the high-quality German chip, this sensor integrates soil moisture with temperature, featuring high precision and sensitivity. The measurement results are consistent, hardly affected by soil properties, making it widely applicable in industrial scenarios such as water-saving irrigation, weather station and greenhouse etc. The built-in independent battery can last for 3 years in ultra-low-power-consumption working mode. With the probe made from high-quality German precision platinum resistor and the enclosure made from PC + PBT materials, the sensor features UV radiation proof and erosion-resistance.
